ATARI

Product Guide

Congratulations on your purchase of an Atari computer, and welcome to the international community of Atari users! As you'll soon discover, there are thousands of fantastic applications to explore with your new computer, from powerful desktop publishing programs and word processors, to utilities that greatly enhance your productivity, to cutting-edge hardware accessories.

This booklet was produced by and showcases a few of the products of a group of developers who belong to the IAAD, the Independent Association of Atari Developers. The IAAD is comprised of many of the most respected developers and publishers in the Atari community, and includes members from several countries.

We hope you enjoy browsing through the products listed in these pages. We've provided phone numbers and addresses for all participating companies; please feel free to call or write for more information.

D.A. Brumleve
P.O. Box 4195
Urbana, IL
61801-8820
217 337-1937
(MC/VISA)

D.A. Brumleve's kidprgs all share a uniquely kid-friendly user interface. Consistent use of color-coding, large targets for the mouse, simplified options, auditory and visual verification of selections, limited use of alert boxes and automatic loading and saving combine to make these programs easy to learn and a joy to use.

All programs are designed for completely independent use by children. The programs described below offer children purposeful activities that will challenge as well as entertain.

Kidprgs grow with the child; parents and teachers can configure the child's disk with appropriate options for the child's current level of development, and the disk can be reconfigured as those needs change. All programs require any ST/STe with a color monitor or television. Printer must accept an ST screen dump.

Kidpublisher Professional

Desktop Publishing Program for Young Writers, which allows even the youngest of writers to compose, illustrate and publish booklets and other documents of the child's own design. Includes extensive drawing tools, four built-in fonts, multiple page and a title page option. Recommended for ages 5-11. SRP: US $35.00

Kidpainter

A Graphics Design program for young Artists, enabling young children to create colorful computer art while experimenting with a variety of drawing tools, including mirror-imaging, block copy, patterning, and others. Children may print their pictures for enhancement with crayons or markers. Children especially enjoy the puzzle-maker option, in which their creations become on-screen puzzles. Recommended for ages 5-11. SRP: US $35.00

Super Kidgrid

Even the youngest users can create beautiful on-screen designs and pictures with Super Kidgrid. Modify twelve challenging built-in samples or create original art. Patterning experiences foster development of math and thinking skills. Print color-by-number pictures for later enhancement with crayons or markers. Recommended for ages 3-11. SRP: US $25.00

Telegram

The Silly Song Player Telegram offers experiences in math, music, reading, and humor, an all in one "you can't do that in software" program. Children control a delivery vehicle and deliver singing telegrams around an onscreen town. A "bouncing-ball" effect helps the child sing along with an accompanying tune. Messages may be printed for later embellishment and delivery in real life! Recommended for readers. SRP: US $25.00

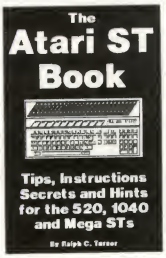
The Atari ST Book
By Ralph C. Turner
ISBN 0-945959-00-1
SRP: US $16.95

Although the ST can be a powerful and easy-to-use computer, many of its features and capabilities haven't been adequately explained in language that the average user can understand. "The Atari ST Book" is aimed at users rather than programmers, and begins where the Atari Owner's Manuals leave off, providing step-by-step instructions that help you get the most out of your ST.

Covers: RAM disks, wildcards and files, the AUTO folder, copying, the DESKTOP.INF file, desk accessories, installing an application, desktop tricks, and much more.



Intermediate and Advanced Atari ST Subjects
By Ralph C. Turner
ISBN 0-945959-01-X
SRP: US $16.95

"ST Subjects" explains in plain English many of the difficult procedures and concepts that challenge the serious ST user. No programming required.

Covers: hard disk management and optimization, ASCII files, running IBM programs on your ST, disk structure and recovery of lost files, assembling your own hard drive system from inexpensive components, SCSI ID numbers and LUN IDs, connecting multiple SCSI devices, connecting a 5 1/4 inch floppy disk drive, sector and file editing, binary (and hexadecimal and decimal) codes, control codes and escape sequences, and more.

Atari ST Topics
By Ralph C. Turner
ISBN 0-945959-02-8
SRP: US $16.95

"Turner's Third Book of Atari ST Topics" covers: connecting a musical instrument to the MIDI ports on your ST, an introduction to MIDI, step-by-step instructions on how to use a public domain MIDI sequencing program, modems, telecommunications software (configuration and troubleshooting), BBSs, CompuServe and GEnie, importing and exporting data between database management programs, using a null modem to transfer files between two computers, public domain software, and much more.

CodeHead Software
P.O. Box 74090
Los Angeles, CA

FAX: (213) 386-5789
BBS: (213) 461-2095

CodeHead Software Gives You Alternatives

HotWire - The Custom Menu Tool

HotWire lets you customize your desktop to maximize your productivity. It's easy to create a HotWire menu that contains all of the programs you use on one screen. Then you can run any program with a single mouse click or keypress, even after returning to the normal GEM desktop. Running programs on your Atari couldn't be easier!

HotWire also includes many other advanced features to make your computer time more productive and trouble-free, with configurable alarms, a ledger system to keep track of the time spent in programs, a clock that appears only in the programs of your choice, and much more.
SRP: US $44.95

MaxiFile
The Supertool

MaxiFile gives you a fast, intuitive means of accomplishing any disk or file operation at any time. You can quickly select any number of files and folders and copy, move, erase, rename, or perform many other operations upon them by clicking the mouse or hitting a key. MaxiFile can also copy and format disks, create folders, find files, and much more. There's not enough room here to begin to list all of MaxiFile's features, yet its on-line help makes it easy even for a beginner to get started right away.
SRP: US $39.95

HotWire Plus
A special bundle called HotWire Plus gives you both HotWire and MaxiFile in one package, at a savings of $15!
SRP: US $69.95

CodeKeys
The Macro Tool.
CodeKeys lets you automate any job. Whether it's as simple as selecting a drop-down menu item or as complex as running a program, loading a file, reformatting it, printing it, and exiting the program, CodeKeys lets you assign the entire operation to one keypress. CodeKeys comes complete with ready-to-use macros for many popular programs to get you started while you learn to create your own.
SRP: US $39.95

MultiDesk
The Accessory Loader
MultiDesk is the revolutionary program that puts an end to the GEM limit of six desk accessories! You can load up to 32 accessories or more, at any time--even while using another program. Groups of accessories can be loaded with one action and you can even run ACCs as if they were programs.
SRP: US $29.95

Also available:
LookIt! & PopIt! $39.95
G+Plus: $34.95
CodeHead Utilities: $34.95
MIDIMAX - The MIDI Performance Tool $49.95

SAFARI™

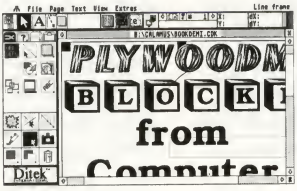
Computer Safari
606 W. Cross St.
Woodland, CA
95695
(916) 666-1813

Computer Safari is the desktop publishers' source for quality fonts. Whether you use PageStream, Calamus, or Calamus Outline, you'll find Safari Fonts invaluable!

We have dozens of unique styles for all manner of layout and design. Whether you need a traditional or modern typeface, you're likely to find a Safari Font that is perfect for the job!

One disk, all formats! Every Safari Fonts disk has both PageStream and Calamus files of each typeface. Lots of folks own both programs, so why buy the same fonts twice?

If you use Calamus, you'll appreciate the way Safari Fonts are constructed. Our characters are outline vector shapes, with no internal pieces or segments to ruin "Outline" effects.
Safari Fonts represent exceptional value and quality for all Atari desktop publishers. At your dealer or write or call us for a catalog!



MS Designs
611 W. Illinois
Urbana, Illinois
61801
(217) 384-8469
Visa and Mastercard
Accepted

MS Designs offers "quality without the price" in our line of low cost, high quality fonts for use with Calamus and Pagestream (the best DTP programs anywhere).

We carefully hand-craft our fonts, using only the finest quality Bezier curves and control points. Our fonts are constructed of the fewest possible elements, for faster screen updates and less disk space consumption. Nearly all our fonts are also suitable for use with Calamus Outline Art.

There is not enough space here to fully show you our product, so please see our advertisements in most Atari magazines for more details, see your dealer or you can order from us.

Beckemeyer Development offers a diverse line of products, from the MT C-Shell family of sophisticated multitasking operating-system software products to easy-to-use hard disk utilities. Beckemeyer Development software users range from the beginner to the advanced programmer.

The Beckemeyer Development engineering staff has designed and installed multiuser networking systems for large corporations and small businesses alike. Founded in 1985, Beckemeyer Development has consistently offered high quality products at reasonable prices. Beckemeyer Development markets several products in addition to those listed below, including retail automation and accounting software. Call or write for more information.

MT C-Shell

Multitasking Operating System

MT C-Shell is a mature and stable multitasking operating system. It allows the user to concurrently execute several programs or tasks. The complete line of MT C-Shell products includes a graphical user interface, networking, on-line help, and much and more. A hard disk is recommended. SRP: US $129.95

Hard Disk Toolkit

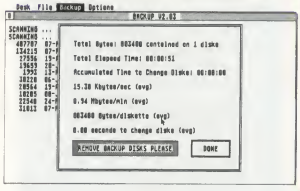
Reliable Disk Backup Software

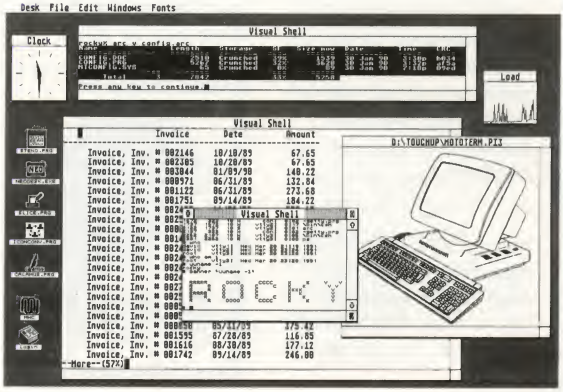
The fast, easy, and reliable way to backup your valuable data. Data compression, error correction, restore and verify all included in this package. SRP: US $29.95

Hard Disk Sentry

Software to Analyze, Repair, and Optimize Hard Disks

Hard Disk Sentry automatically diagnoses and repairs common and dangerous disk problems. Problems that can cause your system to have trouble recognizing files, opening, closing, or deleting folders, locating files or running programs. Hard Disk Sentry detects and corrects most disk problems all by itself. Hard Disk Sentry can also optimize your Atari hard drive, dramatically accelerating disk accesses. SRP: US $49.95





Missionware,

CIS: (73250,572).

Printer Initializer

With Printer Initializer, you now have complete and total control over any serial or parallel printer. It is both a desk accessory and a customization program. "Printer Install" permits you to customize a driver for whatever printer functions you normally need to use. Up to six of these drivers can then be used by "Printer Initializer", a desk accessory callable from any GEM based program. "Printer Initializer" also automatically sets print output redirection so you can easily switch between your parallel and serial printers. SRP: US $19.95.

lottODDS

lottODDS helps you play your state or national lottery. With lottODDS (pronounced "lotto odds") you can wheel numbers, enter your own numbers, pick random numbers, or, its most powerful feature, automatic winning number generation. The program maintains a database that you enter; this lets you choose between one and seven different algorithms for picking winning numbers! lottODDS keeps track of the numbers you played for later comparison against the winning numbers (to see if you've won!) Missionware has developed extremely sophisticated and proprietary routines for both picking the numbers and wheeling them. You can use lottODDS in any lottery that picks between 3 and 10 numbers per game out of a field of 99! Missionware can sell directly to you or through your dealer. SRP: US $34.95

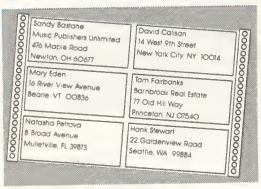
Tracker/ST

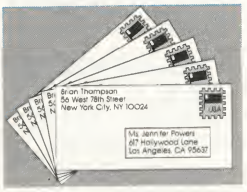
Tracker/ST is a powerful, easy to use mailing list program with a built-in mail merge system and many other features. It prints labels of all types, including 3 across labels. Virtually all printers are supported, including laser printers and the Hewlett Packard DeskJet.



Tracker/ST can store an unlimited number of names in an unlimited number of separate files.

Tracker/ST includes a very easy mail merge system which allows you to print personalized form letters with a single mouse click.

Other features of Tracker/ST include the ability to keep extensive notes on each person in your files,



many reporting options, and Rolodex card printing capabilities.

System Requirements:
One megabyte of memory is required. Demo disk available.
SRP: US $79.95.

Goldleaf Publishing, Inc. 700 Larkspur Landing Circle
Larkspur, CA
93939
415/461-4552
Fax: 415/ 461-3809

Goldleaf Publishing, Inc. is a major publisher of high-end software for Atari computers. Our offerings fall into three categories -- Document Processing, Digital Pre-Press, and Programming Tools. Many of these titles were developed in Europe, where they have been proven in a very demanding and mature marketplace. We believe these products help make the Atari "solution" highly competitive with Macintosh and IBM compatibles in terms of performance, ease of use, and overall value. We invite you to contact us for more information.

I. Document Processing: Wordflair
Developed by Goldleaf Publishing and on the market since December, 1989, Wordflair is an integrated document processor that provides the critical functions of a word processor, page layout program, spreadsheet, and database, in a single, easy-to-use program. Wordflair combines text (multiple fonts and point sizes), graphics, calculations, and data all on an electronic page. Wordflair lets you quickly and easily create letters, data sheets, invitations, newsletters, etc., without switching between programs. Perfect "all around" software for the beginning Atari enthusiast. Runs on all Atari computers with at least one megabyte of RAM and two floppy drives. Hard disk and monochrome monitor suggested.
SRP: US $99.95.

Wordflair II
Wordflair II is a superset of the original product that adds many vital features for the professional user. It comes with the Proximity/ Merriam Webster spell checker 116,000 words with up to 5 user dictionaries), hyphenation and thesaurus. Tab or comma-delimited data can be imported and exported from databases such as Tracker ST and used to produce highly sophisticated mail merges. Full support of FSM GDOS opens up a world of high quality typefaces (Garamond, Palatino, Lucida, etc.) that can be scaled on the fly from 4 to 99 points. This is the perfect product for small businesses or organizations needing to create truly impressive-looking documents like order forms, "smart" invoices that calculate themselves, data sheets, and the like, but can't afford the time needed to switch between several programs to get the job done. Runs on all Atari computers with a minimum 2 megabytes of RAM. Hard disk and monochrome monitor strongly suggested.
SRP: US $149.95.

Sherlook
Sherlook is an entry-level Optical Character Recognition (OCR) program that offers fast and accurate conversion of printed pages into computer usable text files. Working with a scanner, Sherlook can convert printed text into a text file that can be edited with Wordflair or your favorite word processor. Sure beats typing! Sherlook runs on any Atari with at least one megabyte of RAM. Hard disk and monochrome monitor.
SRP: US $199.95

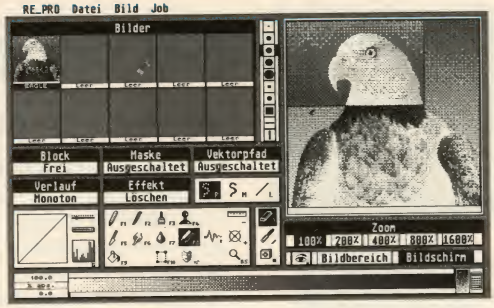
Sherlook Professional
Sherlook Professional adds the ability to recognize multiple font and point sizes as well as multiple columns on a page. It has a unique "training" feature that allows you to "teach" the program to recognize characters. With direct scanner support, Sherlook Professional can process up to 12,000 characters per minute. Requires at least two megabytes of RAM.
SRP: US $899.95.

II. Digital Pre-press Retouche
Developed by 3K ComputerBild, Retouche is a powerful black and white image processing program that allows the creative manipulation of scanned images for use in desktop publishing. Sophisticated dithering features allow you to create "gray scale" images even on a monochrome system. Runs on all Atari computers with one megabyte of RAM, a hard disk and a monochrome monitor.
SRP: US $299.95.

Goldleaf Publishing, Inc. 700 Larkspur Landing Circle Larkspur, CA 93939
415/461-4552
Fax: 415/ 461-3809

Retouche Professional:
Retouche Professional is a "digital lithography" system for producing halftone images of impeccable quality. It features sophisticated brightness and contrast control, a gallery of filters for performing artistic effects, and a "jobs" feature that organizes scanned images, masks, type and line art, for the easy assembly of spectacular photo montages. Its library of over 120 hand-optimized halftone screens matches the appropriate screen angle and dot pattern for the output device and desired printing press. For use with the TT030 Publishing Workstation or the Image Speeder Publishing System.
SRP: US $999.95

Retouche Professional CD (Color Design)
Retouche CD encompasses Retouche Professional's full feature set and adds true color retouching capabilities. Working in either 8 bit or 24 bit mode, a skilled operator can produce separated film of continuous tone images with absolutely astounding speed and quality. For use with the TT030 Publishing Workstation or the Image er Publishing System only.
SRP: US $1,995



Didot Line Art
This program is aimed at the graphic artist wanting to create line art, logos, labels and such in a friendly environment. A variety of tools already familiar to the artist makes it possible to manipulate type outlines, bezier curves and scanned images with ease. Prints Postscript to disk, or output to any popular printers or image setters. Runs on all Atari computers with one megabyte of RAM and a monochrome monitor. Hard disk recommended.
SRP: US $395.

III Programming Tools & Utilities: DevpacST
An easy-to-use integrated 68000 assembler, linker, editor and debugger, DevpacST is designed for the novice and expert alike. Used by many top software developers, this program comes with excellent documentation and runs any ST with at least 512 K RAM and floppy drive.
SRP: US $99.95

DevpacTT
This is the professional 68000/68882 assembler, editor, linker and debugger for generating code that takes advantage of the processing speed and advanced video modes of the TT. Capable of compiling at up to 200,000 lines per minute, DevPacTT supports DRI, GST, Lattice linkable code as well as. Atari executable format and S-records.
Works with any TT.
SRP: US $149.95.

HiSoft Basic 2 (Version 2)
A complete, integrated BASIC Development system using a multi-window, interactive editor, just like an interpreter. Press a key to compile at over 3000 lines per minute. Includes editor, compiler, linker, resource editor, GEM toolbox and code profiler.
SRP: US $129.95.

Lattice C (Version 5)
The ultimate professional C programming environment for the Atari. Lattice comes complete with editor, shell, linker, compiler, global optimizer, resource editor, and libraries for GEM, Unix, ANSI and Lattice. This is the C tool you've been looking for to create elegant, compact code for your Atari application. One megabyte of RAM recommended.
SRP: US $249.95.

Goldleaf Publishing, Inc. 700 Larkspur Landing Circle Larkspur, CA 93939
415/461-4552
Fax: 415/ 461-3809

Lattice C TT (Version 5):

This is what you want if you're programming high-end applications for 68030 machines like the TT. Close to ANSI standard with many compiler and linker options for flexible programming. Fully optimized for the 68030 and 68882 chips. Includes editor, linker, compiler, global optimizer, resource editor, shell, Unix, GEM, ANSI, and Lattice libraries, support for FSM GDOS and CPX.
SRP: US $229.95

HiSoft C

Designed for the beginning C programmer, this development tool features an integrated editing and debugging environment. HiSoft C is interpreted not compiled, which makes development much easier. Completed programs can be compiled using another package such as Lattice. Comes complete with on-line help, GEM toolbox, and a host of utilities. Runs on all ST's and Megas with at least 512 K RAM and floppy drive. TT compatibility coming soon.
SRP: US $99.95

HiSpeed Pascal

A complete integrated Pascal compiler system, compatible with Turbo Pascal 5 on the PC. Very fast compilation speed with a multi-window interactive editor, linker, assembler and on-line help. Support for the Turbo Pascal unit concept along with BGI graphics unit make it ideal for porting applications to and from the PC. Runs on all machines from 520's with floppy drive on up.
SRP: US $179.95

HiSoft Wercs

A superior resource construction set. Create menus, dialog boxes, alert boxes, icons, in an easy to use GEM environment. Many advanced features including resource files up to 64K in length, find object command, icon editor and more. Support for all major languages. Runs on all machines from 520's with floppy drive on up.
SRP: US $19.99

Tempus 2

A very fast and flexible programmer's editor. Edit up to 4 files with powerful wildcard search and replace, complete re-definable keyboard shortcuts, optional word wrap, file comparison and sort utilities, and much more. Very configurable to the programmer's tastes, and exceptionally fast.
SRP: US $79.95

HiSoft Knife ST

A complete disk recovery system for floppy and hard disks. KnifeST is GEM-based, has a sector copier, a flexible disk formatter, a build file to recover lost files when some of the FAT information is also gone and much more. Comes complete with an informative manual on the ST's disk system. Runs on all machines with at least 512 K RAM and a floppy drive. SRP: US $59.95

Harlekin

All the desk accessories you're ever likely to need, including a very powerful and flexible scrapbook, in one program. Harlekin comprises a wordprocessor, diary/scrapbook, disk editor, calendar, RAM disk, printer spooler, terminal program, and more. Runs on any machine with minimum of 1 Meg RAM and floppy drive.
SRP: US $99.95.

Saved!

Ever wished you could recover data from a crashed floppy or hard disk? If you answered yes, this is the utility for you! Recovers even the most seemingly hopeless crashed file. This software brings peace of mind.
SRP: US $39.95

Proflight

OK, so you're sick of programming. Take a break with ProFlight, the Tornado flight simulator. This highly realistic simulator lets you run a variety of missions from reconnaissance to heated battle. Fire heat-seeking Sidewinders, radar guided Skyflash missiles, laser guided bombs and cannon. Hold on to your seats for this one! Runs in color or monochrome on any ST with at least 512 K memory and floppy drive.
SRP: $69.95.

(508) 475-3810 Ph/FAX

"When you feel the need for speed"

Turbo20

The fastest 68000 accelerator available anywhere

- CMOS 68000 CPU running at 20 MHz
- Static RAM cache for maximum speed
- Makes your ST more than twice as fast
- Compact SMD construction won't interfere with other upgrades
- True 8 MHz mode for total compatibility
- Bundled with SofTrek's TurboST software accelerator
- FASTROM option
- Licensed Atari TOS in 100ns EPROMS

For 520, 1040, MEGA, STE and Stacy computers Some desoldering required - STE installation simple plug in w/optional adapter
SRP: US $329.00

Turbo 030

The most advanced 68030 accelerator available anywhere.

- Built around Motorola's advanced 68030 processor, running at 40 or 50 MHz
- Optional 68882 math coprocessor
- Static RAM cache speeds all motherboard operations Up to 8 megabytes of optional super-fast 32-bit • RAM for maximum speed
- Makes your ST 5 to 12 times faster
- Full SMD construction for minimum size and maximum reliability
- 8 MHz 68000 included for total ST compatibility
- Includes licensed, specially modified TOS.
- Bundled with SofTrek's TurboST software accelerator
- Specially tuned for Hi-Res video boards
- Does not require an auxiliary power supply
- Fully BLiTTER-compatible

For MEGA ST or any ST/ STE in a "PC" style case. Some desoldering required. Installation service available

Tiny Turbo 030

- Uses Motorola's advanced 68030 processor running at 40 or 50 MHz.
- Makes your ST 5 to 12 times faster
- Full SMD construction; the smallest 68030 accelerator available.
- 8 MHz 68000 option for full ST compatibility
- Includes licensed, specially modified version of TOS.
- Bundled with SofTrek's TurboST software accelerator.
- Specially tuned for Hi-Res video boards for the MEGA STE.
- Fully BLiTTER-compatible.

System Requirements: For 520, 1040, STE and MEGA STE Some desoldering required. Installation service available

DynaCADD®

DynaCADD is a 2D and 3D general-purpose Design and Drafting software package for electrical, mechanical, architectural and civil applications.

DynaCADD revises, designs and details drawings in 2D and true 3D and reads and writes the industry's standard file formats.

DynaCADD offers an alternative solution to expensive, difficult-to-use CADD systems and brings mainframe CADD capabilities to the CADD Professional at a fraction of the cost.

DynaCADD combines an extensive collection of features, uncommonly fast display speed and seamless performance.

DynaCADD's attention to ease of use drastically reduces the learning period normally associated with CADD packages.

DynaCADD has fully-interactive 2D and 3D capabilities. All calculations are accurate to 16 decimal places, with Math coprocessor support. DynaCADD has an extremely user-friendly icon-based interface. This state of the art interface employs pull-down menus, mouse, keyboard, function and user-definable macro keys. Online context sensitive documentation augments the on-screen command help line.

DynaCADD's features include; multiplane, multipart drawings in 2D and 3D. Hidden Line removal with blended planes and image suppression. The generation of drawings with up to 256 layers, allowing selection of any layer by colour, Entity, weight, etc,.. User definable Grid and Axis. Full 2D and 3D dimensioning. Powerful Text and Font handling for uses such as drawing dimensioning and sign making. A Font editor allows the creation of new fonts and Hatch patterns. Up to 256 hatch Patterns can be defined with this Editor. Agfa Compugraphic fonts are also included with this package. Full support for 9 and 24 pin printers, laser printers, PostScript and EPS compatible devices. Plotters such as Houston Instruments, Hewlett Packard, IOline, Calcomp, HPGL and DMPL are supported.

Ditek International's strong commitment to research and development, combined with a dynamic programming team, insure that DynaCADD will remain on the leading edge of CADD technology.

Minimum Requirements:
All ST/TTcomputers with 1 MByte RAM, an SM124 or 19″ hi-res monitor.
SRP: US $995.00

DynaCADD is a registered trademarks and tradenames of Ditek International. All other registered trademarks and tradenames are the trademarks and tradenames of their respective holders.

ACURA NSX
By Rolf Berger – Images Unlimited
Feb./1991 – Created with Calamus Outline Art

Calamus®

Calamus is professional desktop publishing at an affordable price. Using its own outline font technology, Calamus produces 100% true "WYSIWYG". Fonts can be scaled from 0.1 to 999.9 in 1/10th of a point increments. All text can be rotated 360 degrees. Printer output is FAST! Completely user-definable keyboard commands and macros, a built-in Text Editor and 300 additional features make Calamus the professional's choice on the ST/TT platform!
SRP: US $299.95.

The Guide to Calamus Desktop Publishing®

The Guide to Calamus Desktop Publishing contains 250 pages of hints, tips and tutorials for the entire Calamus family of products as well as Calamus font output examples from AGFA Compugraphic. Created entirely using the programs it covers, the Guide is a valuable and highly recommended addition to the Calamus family of products.
SRP: US $29.95

Outline ART®

Outline Art supplements Calamus with a great number of new functions and effects. Complete vector graphics editor for lines, Bezier curves, control paths etc, with the capability to generate freely-definable raster areas. Text attributes include: rastering, transparent, outlines, rotation, stretching, compression, cursive styles, circular text, text along a freely-defined vector path and kerning functions. Includes an integrated, fully-programmable calculator with a pre-defined and extendible library of transformations, intelligent clipboard and copy functions and much more. Included with Outline Art, is our own Convert2X.PRG which allows the translations of CVG to either EPS® or PS® for importation into most desktop publishing solutions.
SRP: US $289.95.

Calamus Font Editor®

A Designer's tool for the creation of fonts, using Bezier curves, graphical objects and pictures in a vector graphic format. All fonts then take on all Calamus attributes. The Calamus Font Editor and includes 28 additional typefaces for Calamus.
SRP: US $99.95

Minimum Requirements:

All ST/TT computers with 1 MByte RAM, an SM124 or 19" hi-res monitor.

All Calamus® products are the registered trademarks and tradenames of DMC/Ditek International. All other registered trademarks and tradenames are the trademarks and tradenames of their respective holders.

Actual Low-Rez picture loaded into MVG with halftoning.

MVG

Dr. Bob's Handy Dandy Multi-Viewer Graphica

Not just another pretty face, but a feature-packed bitimage editor designed for both speed and expandability.

Image size is limited only to available memory, not to the screen size. MVG reads all the standard ST graphic file formats such as PI3/PC3, TNY, Neochrome and, of course, IMG.

MVG reads Low-Rez color pics and performs a dazzling mono half-tone that rivals the original. Read both true MAC files and those "other" MAC files used in IBM desktop publishing packages.

MVG writes Degas, Neo, IMG and true compatible MAC file formats directly; writes others using optional modules.

Built-in Features:

- Versatile Fat Bits editor that pans the entire image.
- Skinny-Bits editor for lines, frames, boxes, patterns, circles and more.
- FLIP
- ROTATE90
- FULLVIEW
- RESIZE
- DITHER
- 4 FONTS
- TWO CLIPBOARDS
- Loads GDOS fonts too -without using GDOS
- And an AMAZING CLIP-N-PASTE that you won't believe!

We haven't forgotten "Power without the Price"

And… Did we already mention that it's FAST?

MVG v2.0 System Requirements:
Monochrome only. Big screens. Support for 9 & 24-pin Epsons, HP DeskJet and Laserprinters.
SRP: US $59.95

MVG Support Products:

Modules Disk #1
Read GEM meta files into MVG. Whole drawing or zoom-in on section. ImageShaver cleans up stray pixels and smooths edges. Saves hours of work.

ToyBox resizes, rotates in degrees, masks patterns and more to a clipped box. Duplicate your image any number of times both vertically and horizontally. Grey halftoning for any image, with enlarging. And More…
SRP: US $29.95

Handscanner Modules:
View as You scan.
100-400 DPI
Migraph Module
SRP: US $19.95
GeniScan/ST Module
SRP: US $14.95

IMAGE CAT

At last! An effective way to catalogue your collection of clip art, pic files, and graphics. Image Cat will print the entire picture, up to 15 on each page, and up to 27,000 pics with a single click of the mouse!

Handles .IMG, Degas .PI#/.PC# (color or mono), .NEO, .TNY, .GEM, .MAC, .IFF and more. Plus: catalogues Printmaster Icons, NeoDesk .NIC files, DC DeskTop .ICE files too! Never again will you wonder what that FACES001.IMG is really a picture of. Just look in YOUR catalogue of YOUR clip art. Choose the right picture for your needs.

Compatible with most popular printers including SLM, HP Desk/Laser, Epson 9 & 24 pins and more. A desktop publishing must, but very good for keeping track of your color collection as well.
SRP: US $37.95.

MUG SHOT!

Parts is parts they say, but with MUG SHOT! parts add up to a whole lot of fun and practicality. Use individual parts to create more than one billion billion faces with just the data that is included on the program disk - Famous faces and cartoons.

Included is a full store of drawing tools so you can make your own enhancements beyond the billions and billions of combinations already at your finger tips.

Additional data disks are only $19.95 and run the gamut from the FBI's 30 most wanted through MAD TOONS to puzzle parts and more.

Saves in .IMG or Degas PI# format. Prints in four sizes on most popular printers including SLM, HP Desk/ Laser, Epson 9 & 24 pins and more.
SRP: US $39.95

NeoDesk® 3

The Ultimate Desktop

NeoDesk® 3 is a replacement for the built-in desktop. It is the easiest and most affordable way to realize your Atari's true potential.

NeoDesk 3 adds many new features and enhancements, while remaining compatible with your other software.

Not only will your computer be more powerful, it will also be easier to use.

No Experience Required!

Of course, no amount of power and performance is beneficial unless it is easy to use. Rest assured, NeoDesk has been designed to be "upwardly compatible". Use it just like you would use the built-in desktop.

Major Features

In NeoDesk you can place commonly used files, programs, and folders on the desktop, while the internal Icon Editor lets you design and assign different icons to your files and folders.

Not to limit your creativity, you can even write Desktop Notes directly on the desktop itself.

Thanks to its amazing Split Window feature, you can view two different parts of the same window. Of course, each window can be set to display text or icons independently.

NeoDesk is very smart. When copying files, it reads in as many files as will fit into memory and then writes them out. No more useless disk swaps. Even hard drives are more efficient.

Add some other features, such as keyboard controls, desktop pictures, file templates, Active Icons , Hot Keys, and the Recoverable Trashcan, then you have more than enough reasons to buy NeoDesk.

NeoDesk has a unique File Clipboard which temporarily holds files in memory. You can think of it as an automatically expanding and shrinking ramdisk. Macros, another powerful feature, can automate any desktop operation. With the touch of a button, select all the files in a window including those not visible. Files can also remain selected while scrolling or resizing that same window.

A special Reorder mode lets you change the order of the files in any directory. Use it to customize how your window contents are shown.

Many other useful features await your discovery in this amazing package. There's even an optional NeoDesk Developer's Kit, which opens a whole new world of endless possibilities.

NeoDesk has also won several prestigious awards:

ST World (UK) Editor's Choice:
Best Utility of 1989
1989 ST World (UK) Awards:
1st Place, Overall Best Software Product
1st Place, Best Utility
ST Format Reader Survey:
Best Utility of 1990

System Requirements

Any Atari ST/TT computer. All screen resolutions. Only requires 35k of memory when running a program. A hard disk is not required.

NeoDesk® CLI

This is a complete window-based command line interface. It hooks directly into NeoDesk itself and includes an extensive set of commands with both MS-DOS® and UNIX style commands. With this accessory you can create powerful batch files, automate complex file operations, create pop-up menus, and much more!

NeoDesk 3 - The Ultimate Desktop and the NeoDesk CLI are available from your local dealer, or order toll free by calling (800) 284-4742 and receive FREE 2nd Day Air shipping (US only).

STalker 3

Telecommunications

STalker 3 is a complete, easy to use, telecommunications and terminal emulation program for your Atari ST/TT. STalker 3 fully utilizes the GEM interface, making it easy to learn for even the novice user.

Experienced terminal users will appreciate its powerful performance and rich set of features. Use it with your modem to access the computer at work, local Bulletin Board Systems, online services, and more.

STalker can be run as either a stand-alone program or as a convenient desk accessory. When run as a desk accessory, all functions can be used in the background (including file uploading and downloading), allowing you to continue using the computer for other tasks.

STalker runs inside its own GEM window. This allows complete access to other programs, desk accessories, and the desktop without interrupting your online session.

When run as a desk accessory, STalker 3 places its complete drop-down menus inside the window. This allows full access to its entire menu set from inside any program.

STalker completely emulates a VT52, VT100, or PC-ANSI terminal. A configurable scroll-back buffer makes sure you never lose any valuable information. GDOS support allows you to change the terminal fonts used, and even use the included ANSI compatible font.

Its powerful autodialer lets you keep complete phone books for all your online services. This autodialer can even dial a group of numbers until connected. Log in procedures can also easily be automated.

Transfer protocols include Ascii, XModem, YModem, YModem Batch and Zmodem. All of which operate in the background. Support is included for the Shadow file transfer utility.

Data screens can be easily saved to disk or printed to a printer. The mouse can be used to cut & paste any important information.
STalker will use all of your serial ports, including the new ones on the TT/030 and Mega STE. You can even run multiple copies of STalker at the same time, each connected to its own serial port.

STalker 3 also has special hooks to interface with the popular NeoDesk® 3 desktop.

BackTALK Script Language
STalker includes, free of charge, the powerful BackTALK Scripting Language. This complete, easy to use, scripting language allows you to customize, modify, and program STalker to perform any function you desire. Complex online operations can be fully automated. The language is powerful enough that a complete Bulletin Board System could easily be written in it. The included BackTALK compiler allows you to generate fast compiled scripts for use with STalker 3.

STeno Interface
STalker 3 interfaces directly with the STeno text editor (available separately). You can use STeno to edit electronic mail messages, as a capture buffer for STalker, as a cut & paste editor, and even as a powerful type-ahead online editor.
System Requirements:
STalker works on any Atari ST, STE, or TT/030 computer. A hard disk is not required.

STalker 3 copyright © 1988-1991 by Strata Software. Exclusively marketed & licensed by Gribnif Software. Ad copyright © 1991 Gribnif Software. All Rights Reserved. STalker is a trademark of Strata Software. All other trademarks belong to their respective holders.

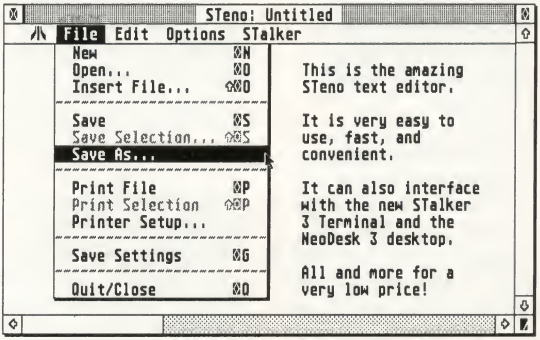
CardFile 3
Information Manager

CardFile is the complete personal information manager for your Atari ST/TT.
With CardFile you can create a complete Rolodex® style address book and phone list. Each card can hold up to 13 fields of information.
A powerful filter lets you instantly find any specific address or phone number.

CardFile's appointment calendar keeps track of all your appointments and important dates. At the touch of a button, it will even print your daily agenda. Never forget another birthday or meeting! CardFile also can insert an address into your word processor, address envelopes, or even dial the phone.

CardFile is very convenient. Program and accessory versions (included) allow access to CardFile at all times.

CardFile works with all Atari ST/TT computers, and even has special hooks to interface with the popular NeoDesk® 3 desktop replacement.



STeno
Powerful Text Editor

STeno is a complete and easy to use, window based, text editor for your Atari ST/TT.

With STeno you can easily edit any standard ASCII or plain text file. It even has powerful text formatting controls.

For maximum convenience, STeno can even be run as either a desk accessory or as a stand alone GEM program.

When run as a desk accessory, STeno places its complete drop-down menus inside its window. This allows full access to its entire menu set from inside any program.

STeno's fast text scrolling, powerful cut & paste capability, and efficient search & replace function make text editing a breeze.

STeno can even interface with the popular STalker 3 telecommunications package to act as a capture buffer, cut & paste editor, and type ahead editor.

STeno works with all Atari ST/TT computers and can even interface with the popular NeoDesk® 3 desktop.

INFORMER II
Version 2.03

INFORMER II is a general-purpose, multiple table, semi-relational, data/image manager capable of processing data records and manipulating presentation graphics. There are up to 4 Tables (unique sets of records) in each database. Much like having 4 databases in 1. Each TABLE has it's own multiple record LIST view and a corresponding data entry FORM view. INFORMER II takes full advantage of the Atari ST's easy to use graphical interface and offers power and versatility to both the novice and experienced user without having to do any programming.

For more information on INFORMER II, contact your dealer or Soft-Aware. Minimum Hardware required - 520 ST & 1 Dbl sided disk drive. Runs on all Atari ST/TT systems. Works with all versions of TOS in both Color and Mono.

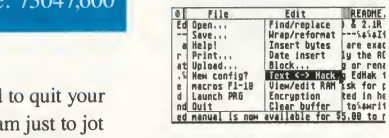
EdHak

No more need to quit your current program just to jot down some notes, write a letter or read a doc file.

EdHak is a powerful Desk ACCessory word processor (text editor) that can handle files even larger than your ST's memory.

However, EdHak is not limited to text editing; you can edit binary files (e.g., .PRG files), disk sectors, and even any part of your ST's RAM if you are adventurous.



Besides normal word processing commands, EdHak has many special features such as: append text to the end of a disk file, send a block to the modem port, search/replace/insert all 256 characters using their decimal or hex values, encrypt your private works, and even launch another program.

EdHak runs in all three ST resolutions (mono or color) and is compatible with larger than standard screens. It also runs as a stand-alone PRG if you like.

Put simply, EdHak lets you edit ANYthing ANYtime!

BLACKJACK PLUS 3

A unique program that simulates a real casino environment. Explore every aspect of the game of blackjack. More than just another game, this program can show you why you have lost in the past and teach you how to WIN in the future! You will find this program equally valuable whether you are a new or an experienced blackjack player. It provides the ability to set up and practice different playing and betting strategies. Play the game with one to seven players. Set each player to any one of four playing modes and seven strategies. Extended statistics are tallied and displayed on the screen or printed. The log may be printed showing all play action and statistics by session. All aspects of the game of blackjack are supported: Insurance, Double Down, Split, Surrender, Double Down after Split. Play with one to nine decks, specify dealing depth. Select casino rules, adjust playing speed, operate with keyboard, mouse or joysticks.

You may program betting and playing strategies with or without card counting. BLACKJACK PLUS 3 is just plain fun to play!
SRP: US $89.95

The VOICE DEVELOPMENT SYSTEM

is available for the synthesizers listed below. Don't miss this opportunity to acquire the program that makes it easy to create new sounds! Make no mistake, these are not 'generic' editors. These products are specifically designed for each supported instrument, offering complete compatibility and ease of use. Each program includes a graphic EDITOR displaying your instrument parameters, a LIBRARIAN to organize & store patches, an integrated SEQUENCER to audition your new sounds at the touch of a key! And, a PATCH GENERATOR that allows you to select two parent patches from which 32 new patches will be genetically generated, or randomize any patch, or mix two sounds. Endless possibilities!

Generation Gap Plus
A program for doing genealogy on your Atari computer.

Features include:

• Unlimited note fields in each record.

• Easy linking of family members in to family groups.

• On-screen pedigree chart.

• Soundex code generation.

• LDS ordinance data supported (user selected).

• Full GEDCOM support for easy transfer of data to and from other genealogy programs that also support GEDCOM v2.1 or later.

• Blank pedigree charts and family group sheets can be printed to be filled out away from your computer.

• Prints family group sheets, pedigree charts, name lists, descendant charts, etc.

• Printer output can be directed to an ASCII (plain text) file on your disk for importing in to word processors or publishing programs.

System Requirrements: Most printers supported, including Atari SLM804 and HP Laserjet/Deskjet. Generation Gap Plus will run fine on one floppy. However, for situations where more than 200 records will be required, a hard disk is highly recommended.

Turbo ST

Want more speed? Just copy Turbo ST to any disk you start your computer with and the speed of most popular ST programs will be increased by 50 to 100 percent, saving you time and fatigue.

Typical examples include desktop publishing packages such as Calamus and PageStream, word processors such as WordPerfect and Word Writer, database programs such as SuperBase Professional and dBMan, spreadsheet programs such as LDW Power and VIP Professional, programming packages such as HiSoft BASIC and Devpac ST, and telecommuniation programs such as Flash, Interlink and STalker.

And no surgery is required, because Turbo ST works all its magic in software by replacing the routines that display text and graphics with high−speed equivalents.

So why not join the more than 10,000 Atarians who speed up their favorite programs with Turbo ST? SRP: US $39.95.

MIND over MIDI PRODUCTIONS

SLAVE DRIVER

Live performance software for the ST: combines exhaustive MIDI mapping capabilities with flexible sequence playback controls.

SLAVE DRIVER allows the Atari ST to take over all the gory details of running a MIDI system, leaving the musician free to play music, as musicians were intended to do.

An entire keyboard system can be run easily from one or more "master" instruments, sequence arrangements can be altered based on what you play, and patch libraries can be easily saved and recalled from disk or computer memory.

Can be run without the Atari monitor by directing text to MIDI instrument's LCD displays.
SRP: US $299.00

VEDAS

Program your Lexicon LXP-1 and LXP-5 reverb/ multi-effects quickly and easily with the ever-expanding line of VEDAS editors from MIND over MIDI. Finer control over parameters, waste no more time editing from the front panel, all parameters can be easily displayed and edited on graphic sliders and knobs. Save patches with comments to disk, tap keyboard to set delay times. Runs as a program or a desk accessory, able to simultaneously support multiple units.
SRP: US $79.00
